

Calculated risk for exposure to coronavirus, Saskatchewan, May 2020 (n=884)

This map shows a calculated risk for exposure to coronavirus in Saskatchewan for month of May, 2020. The calculated risk is net of mitigation strategies people reported. Each coloured dot is a person's location. Red and amber dots representing a calculated high and moderate-high risk for exposure, respectively, and green dots are low-moderate and low risk. NOTE: The red or amber dots **do not** mean those with the virus, only a calculated risk for exposure to the virus.
